(54) INK JET RECORDING SHEET

(57) Abstract:

PROBLEM TO BE SOLVED: To provide an ink jet recording sheet having good color developability with suppressed curl after print recording without cockling at print recording, in the sheet using a cloth as a support.

SOLUTION: The ink jet recording sheet comprises a resin layer coated on one surface of a nonwoven fabric with an ink receptive component and on its opposite surface with a resin having a glass transition temperature of -20°C

or below, and a back sheet sequentially laminated. The ink jet recording sheet is obtained by impregnating a nonwoven fabric with a resin having a glass transition temperature of -20°C or below. The ink jet recording sheet comprises a resin layer impregnated with an ink receptive component containing a resin having a glass transition temperature of -20°C or below in a nonwoven fabric and made of a resin having a glass transition temperature of -20°C or below on one surface, and a back sheet sequentially laminated.
